

ST TROPEZ SPRAY TAN TREATMENT ADVICE

Preparation for application

Do not wax or shave on the morning of your treatment. It is preferable not to apply any type of perfume, deodorant or aromatherapy oils as they may affect the treatment. The evening before your application exfoliate your entire body using St Tropez Body Polisher. Pay special attention to dry areas of the body such as hands, elbows, knees and feet before moisturising with St Tropez Body Moisturiser. It is preferable to wear dark, loose fitting clothes immediately after your application.

The Application

The treatment takes just a few minutes to cover the whole body. The solution will dry on your skin in just a few minutes so you can step back into your clothes straight after your treatment.

Once leaving the salon

The tan will start to develop 2-3 hours after application and continue to develop for up to 24 hours. Therefore it is preferable not to shower for up to 8 hours after the application. Any product left on cotton bed linen will wash out. Do not take part in any activity which may cause perspiration during development time.

Maintaining your tan

Your tan will last longer with the correct aftercare:

- Apply St Tropez Body Moisturiser daily. This is a hydrating body lotion which contains l-tyrosine, an ingredient that activates the melanin in the skin ensuring your tan lasts the longest possible time
- After tan starts to fade exfoliate with St Tropez Body Polisher every two days to ensure your tan fades evenly
- Do not rub but pat the skin dry after showering or bathing. Avoid swimming pools as chlorine will bleach your tan

Please note: For the short period of time that your face is sprayed, close your eyes and do not inhale. If you suffer from respiratory problems, please consult your doctor before booking your treatment
